

Mxp-015 - Installation Guide

Product Description:

The Mxp-015 is a 8-way key-switch input card which connects to the switch input header on the display card and accommodates up to 8: Mxp-016 / Mxp-017 plug-in Key-switch assemblies.

Panel Mounting Arrangement

The card mounts on three, adhesive backed, nylon pillars (supplied) directly below the display card so that the 10-way latching pin header (PL1) on the ‘key-switch input card’ is in line with the 10-way latching pin header (PL6) on the ‘display card’.

A 10 way single in line ribbon cable is used to connect the input card via the latched header, PL1, to the 10 way latched header on the back of the display card.

An adhesive backed cable clip is provided to hold the wires from the key-switches back against the display mounting plate and away from the display card.
